

# Nappy rash & cradle cap

## A common problem that's easy to treat

Nappy rash is very common and can affect lots of babies. It is usually caused when your baby's skin comes into contact with wetness that collects in their nappy. A nappy rash causes your baby's skin to become sore. The skin in this area may be covered in red spots or blotches. You might need to change their nappy more often. Most nappy rashes can be treated with a simple skincare routine and by using a cream you can get from the Pharmacist. With a mild nappy rash, your baby won't normally feel too much discomfort.

There are two types of nappy cream available. One is a barrier cream to keep wetness away from your baby's skin. The other is a medicated cream, that is good for clearing up any soreness but should only be used when advised by a health professional.

Call in to your local Pharmacist and ask about creams they can provide you with over the counter.

### Health Visitor's nappy rash tips

- Leave your baby in a warm, safe place with no clothes or a nappy on, to let the air get to their skin.
- Use a barrier cream.
- Remember to change and check their nappy often.

### Health Visitor's cradle cap tips

**This is the name given to the greasy yellow-brown scales and crusting affecting the scalp in newborn babies.**

Do not pick the scales as this may increase the risk of infection. It is not a serious condition and it not contagious. It is not usually itchy and will usually clear up within weeks to a few months.

- Soften the scales with baby or vegetable oil (not olive oil) over night. After softening the scales use a soft brush or cloth and gently remove any loose scales and wash the hair with a baby shampoo. If any hair comes out with the scales it will grow back.
- Gently wash the baby's hair and scalp with a baby shampoo. Use a soft brush or cloth to loosen and remove the loose skin flakes.

Talk to your Health Visitor if the rash spreads or there is any infection or oozing.
